

Full Stack Web Developer CV

PHP, MySQL, JS, CSS, HTML

First name: **Oleksandr**

Last name: **Kolesnichenko**

Telegram: [@zion3000](#)

E-mail: zion3w@gmail.com

Skype: [live:zion3w](#)

Site: [z3w.site](#)

Experience: **since 2015**

Purpose:

Looking for a **full time** job as a **full stack | front-end | back-end** web developer or a webmaster.

Skills:

- **Web Development:**

- **PHP(7)**^{7/10}. Know Joomla CMS very well. Familiar with Composer, Laravel, CodeIgniter (PHP Framework), WordPress, OpenCart, MODX Revolution (CMS), 1C-Bitrix (CMS) and etc. Prefer clean php code, not frameworks.
- **MySQL**^{6/10};
- **JavaScript**^{8/10}, [Vue.js](#), [Turbolinks](#), [jQuery](#), (Angular basics);
- **HTML(5)**^{9/10}, [Nunjucks](#), Email templates;
- **CSS(3)**^{9/10}, [LESS](#), [SCSS](#), [Stylus](#);

Additional:

- **NodeJS**^{5/10} (self-written template engines, automation of various tasks), **Gulp**;
- **Android Apps**^{5/10}, from creating an account to publishing and promoting applications on Google Play, [Cordova](#), [Ionic Framework](#), JAVA basics;
- **API**: Google([OAuth2](#), [Maps](#), [YouTube](#), [Blogger](#)); Emails([SendGrid](#), [Mailgun](#)); Messengers(chatbots for [Telegram](#), [Viber](#)); Social multimedia([FB](#), [VK](#)); Ads, Analytics, Marketing tracking software;
- **Git**.
- **Web server software:**
 - Debian/Ubuntu → [Webmin](#) + [Virtualmin](#) LAMP stack || [VestaCP](#) LAMP/LEMP stack = PHP web hosting, mail server, MySQL/PostgreSQL database server, DNS server, FTP/SFTP server, free SSL Certificates, *etc.*;
 - Linux Bash Scripting Basics, bash scripts for deploying building systems for Android applications on VPS;
 - VPN, Proxy servers;
 - Using [OVH](#), [Hetzner](#), [Vultr](#), [DigitalOcean](#), [Google Cloud](#), [Alibaba Cloud](#).
- **Graphics and multimedia for web:**
 - Raster and vector graphics, custom fonts, creating/converting and editing PDF, mixing and editing audio and video content;
 - Adobe Creative Suite: Photoshop, Illustrator, Acrobat, Audition, Premiere Elements;
 - [Figma](#)
- **Search engine optimization (SEO), advertising and social media marketing:**
 - SEO: semantic core, internal linking, valid HTML and schema.org structured data(Microdata, JSON-LD), search results snippets;
 - SMM: popular social networks REST APIs, auto-posting, likes, followers, etc.
 - Targeted advertising (including political), custom audiences, analysis of statistics;
 - Creation and pumping of fake accounts for advertising.
- **Project Management:**

[Jira](#)(Next-gen software project types), [Redmine](#)(as user), [Trello](#).

- **Anonymity on the Internet:**

- anonymous operating systems (Linux, Windows, Android), browsers, sites and servers, phone numbers, payment cards, instant messengers, postal and social accounts that cannot be tracked by system, browser, location, IP and various of other factors;
 - operating systems on VPS with browser access;
 - cryptocurrency wallets (BTC);
 - mobile phones with changeable IMEI;
 - this is not about using VPN, Proxy or Tor, but a whole range of tasks aimed at hiding digital traces.
-

Experience:

Since 2015, I had work as a freelancer with different projects, customers and developers from around the world. I do not have similar experience in companies at a full time position.

2018 - front-end developer at online casino development company.

2019 - freelance, remote, own projects.

2019-2020 - Full stack Web/Android developer at traffic arbitration company.

2020, Summer - Build, Rent, and Sell "gray" Apps on Google Play.

2020, Autumn - an unsuccessful attempt to build an arbitration team (not my own) from scratch.

2020-2021 - full stack developer. most of the online processes in a political advertising and political PR company.

2021 - 2 weeks as a SMM proger at online casino. A lot of very smart integrations. All about ads, facebook and sms(Twilio, e.t.c. with API).

2021-2022 - professional burnout.

2022 - FB accounts for advertising, FB advertising integration, cloacks for android apps, html5 games.

2022, Summer - Vue.js Frontender at cryptocurrency exchange website.

2022-2023 - tech lead at affiliate marketing company.

Portfolio:

2048-number-puzzle.z3w.site - PWA 2048 puzzle game. It's on [Google Play](#). Vue.js based. Forked from github repo, and changed.

renaissance-artists-art.z3w.site - PWA puzzle game featuring Renaissance artists. It's on [Google Play](#) and [Huawei AppGallery](#). Canvas based. Forked from github repo, and changed.

hex-war.z3w.site - kind of a hextris game. PWA. It's on [Google Play](#) and [Huawei AppGallery](#). Canvas based. Forked from github repo, and changed.

idemocracy.world - multilingual website of a non-governmental public organization.

istrategy.pro - multilingual website for a political consulting company.

Features:

the site is made on a self-written system (something like a multifunctional framework for my own projects).

facebook-posts-search.z3w.site - Search posts by date range in Facebook.

kherson.stream, nikolaev.stream, odessa-news.stream, it-news.press - news parsers from different sites. It's on [Google Play](#).

Features:

50 000+ articles each site; 90+ pagespeed rating; white and dark themes; getting videos with Youtube API by cron task; PWA; Android Applications; Turbolinks AJAX navigation; updating all sites from one Git repository with one Gulp task; contact form notification to Telegram, Viber, Email; weather news are parses by cron from another site; written own script for CPA-advertising(type of CPA adverts depending of string in url); Microdata, JSON-LD markup.

internet-news.stream - site with articles about Gambling News.

yahtzee.online-casino-games.world - PWA Yahtzee dice game. It's on [Google Play](#). React + Three.js 3D Library.

online-casino-games.world - online casino demo games from popular iGaming providers.

Features:

the site is made on a self-written flat file system (something like a multifunctional framework for my own projects); 90+ pagespeed rating; PWA; Turbolinks AJAX navigation; contact form notification to Telegram, Viber, Email; Microdata, JSON-LD markup.

fbtools.shop - simple API site for facebook bots(bots works under Windows OS).

Features (short):

Admin can manually add different type of bots to users. Each user has own unique key, each bot has own expire time and other fields for identification, depending of unique key, and bot activation time. After user adds this key to bot, bot sends a request to api server, where key is checked. If key is valid, than bot is register on a user(if this bot was not registered earlier) and json object returning to bot with an active status and expire time. Otherwise, a json object with an error and a description is returned. My task was create a site, not a windows bots.

dostavka-lda.odessa.ua - ice delivery site.

Features:

Laravel; 90+ pagespeed rating; PWA, site works offline; Turbolinks AJAX navigation; order form notification to Telegram, Viber, Email; Microdata, JSON-LD markup; own texts.

avtolombard.ru, lombardmsk.ru, sever-lombard.ru - Moscow pawnshops sites.

Teamwork. Creation of site pages according to basic design. Many improvements and fixes.

jerusalem-services.city - catalog of services, where users can add their services and reviews.

Features:

Hebrew(RTL language). Not the best design:) Most of plugins, extensions and modules was heavy customized. Ability to filter search with working hours. Autocomplete for map places search is limited to Jerusalem only. Lazy image loading, custom js validation, native item image gallery replaced to Lightgallery, etc. Many improvements and fixes.

zlat-nt.ru - website of the software supplier for preschool institutions.

Features:

The basis of design from the previous version of the site. Conversion of the customer DBF database with users to SQL format, clearing and deleting duplicates with the subsequent integration to the new website MySQL database. Integration users from previous site to the new site database. User account.

girbu.cz, elwas.cz - websites of a companies, performing the whole range of electrical works.

remont-kvartir-kiev.z3w.host, open-air.demo.z3w.site, strikeball.demo.z3w.site(1234 or 4321 - pass to enter)

Improvements, bugs/security fixes, minor works:

roossa.ru, lombard-car.ru, jerus.city, news.jerus.city, zakonpro.ru, www.lombardrus.ru, bot4sale.ru, sport-laboratory.ru, etc.

Additional:

- OLX parser,
- mass messaging in Telegram,
- cloaks for Facebook ads,
- [cloaks generator for Facebook ads](#),
- gray apps for Google Play and cloaks for moderation,
- html5 games (slots, puzzles, simple casual games, etc.) for applications for Google Play,
- analysis and assessment of the quality of the audience of Telegram channels.

[gulpfile.js file](#), with a gulp task to update this site from gitlab repo.

[package.json file](#), with a [gulpfile.js](#) devDependencies.

Personal info:

Marital status: not married.

Languages: Ukrainian, Russian, English.

Education:

2006-2011 Admiral Makarov National University of Shipbuilding (Kherson branch) - Electromechanical automation systems and electric drive.

2011-2012 Admiral Makarov National University of Shipbuilding - Department of ship electric power systems.

About me:

Interesting UX and UI. Adept for dark design themes, fast front-end and pure JavaScript. Like teaching or helping other people in my knowledge field and in related fields.

I also consider vacancies in the position of a team lead, project manager or something more interesting(for example, an astronaut;)
